PARTNER WITH INVENSIS FOR END-TO-END SUPPORT IN SOFTWARE APPLICATION DEVELOPMENT

Invensis Technologies provides support for all stages of the Software Application Development Lifecycle

SOFTWARE DEVELOPMENT SERVICES SUCCESS STORY

The Client

A major Australian e-commerce player that commenced operations in 1974 as a mail order catalog company. The company's mission to make shopping from the convenience of one's home a fuss-free, risk-free and cost-effective experience, has been unchanged over the years. The company now receives purchase orders from customers via the Internet, and the traditional mediums of telephone, fax and mail.

The Business Requirement

In July 2014, our client, who had already decided to partner with Invensis for order data entry services, mandated us to develop an internal custom software application to facilitate the processing of order invoices, reduce order entry time and make the back office BPO process fast and error-free. Any existing data entry application in the market would require modification, and the client was in favour of a customized application for their particular business requirement.

The Invensis Solution

- Requirement gathering and analysis to gain an in-depth understanding of the business use of the application
- The application was designed and developed on .NET framework
- In its user interface front-end, the application displays the scanned invoice in the top window, and customized fields where data from these orders can be entered by the back office BPO professionals in the bottom window.
- An encryption function was created to secure fields with confidential financial information
- Application was linked to a database created in MS SQL to get stored product information and accelerate the pace of outsourced data entry process
- A double entry quality check process was designed
- Enabled the admin to export entered data into .XLS format
- Updating the application based on client requirements

The Result

Close to 4,000 orders entered and processed on the application every day, improving daily productivity by 34%

With a double entry quality check, output quality has improved from 85% to 99%

22% decrease in transaction processing cost

Streamlined order data entry

THE INVENSIS FACT FILE

- ▶ 20+ years of experience
- ▶ ISO 9001 and 27001 certified Multiple
- ▶ delivery centers
- ▶ 3000+ trained professionals
- ▶ 8+ service verticals
- ▶ 200+ clients served around the world
